To: Jack Dermil
From Ken Tannen
cc. L. Windel

RTNW

Critical IH/OH Concerns DATE 1-17-79

1. Guidelines are needed for the line organization to address exposures data on personnel that are exposed to materials listed in OSHA 1910.1000 subpart Z. The guidelines should be uniform throughout C/P.

(a) Does the employee have to be informed of his exposure?

(b) What should the monitoring frequency be if the TWA is exceeded?

(c) Is medical surveillance required? Since there are no specific requirements by OSHA for those materials as there are for those with specific standards, there should be some uniform practice to follow over the years.

2. Training packages (films, audio, slide, etc.) for use by the line organization to fulfill the training requirements of OSHA are needed. Training programs and aids should be prepared [illegible] and training [illegible] should [illegible] Updated [illegible] periodically.

AVOID VERBAL INSTRUCTIONS

DATE

2 Is Jack sent, some where to
write a model for obtaining info for
or specific materials, such as a computer
data bank that would, on demand, print out
C/P guidelines, information on hazardous materials,
physical properties, etc. Dermil has an info
system, Mr Richard V. Dias is or was
incharge of it.
