COMMENTS:

In instrument repair room chemicals + cleaning powder stored with eating utensils

Cooking utensils in both control room and Inst shop are not in sanitary condition, cabinets are in much need of cleaning.

Sink in control room & Inst sink in instrument repair room very dirty.

Counter top in instrument ~~control~~ repair room dirty.

Both refrigerators need cleaning

COMMENTS:

One refrigerator in lunch room needs cleaning. The one in the maintenance glass fitting area was clean. Suggest that lunch table in glass fitting area have a new top installed or that all personnel eat in lunch room of building. "Service Water" label instead of "Not Potable" may be OK, will check. Walls are as clean as possible in condition they are in. Wall below and around lavatories are deteriorating badly.

COMMENTS: (1) Non potable water drops are labeled "PLANT WATER" they should also be labeled "NOT POTABLE".
(2) Seal is broken on next to last toilet.
(3) Floor is rough worn concrete and very porous. an epoxy coating would enhance cleaning.
(4) Urinals are badly corroded around edges. This provides a site for bacteria accumulation. Replacement should be considered.

Gentlemen:

The attached page(s) are the results of the biannual sanitation inspection of building(s) under your responsibility.

Note that restrooms were in overall good condition, but improvements are needed in some areas where food preparation facilities exist. As problems are corrected you may use the "comment section" of this/these form(s) to advice me of actions taken. I will summarize the inspection reports for Ben Brown and Dr. Glenn.

Thanks for your cooperation.

Very truly yours,

K. Gran Townsend
