Time-Weighted Average Concentration (TWA) -

Ceiling Concentration -

ALLOWABLE EXPOSURE (8 Hrs.)

TWA	2 fibers/cc	X OSHA	___UCC	___Other
Ceiling		___OSHA	___UCC	___Other

COMMENTS

J. W. Greenlee was monitored while stripping old insulation from approximately two hundred feet of steam line in Building 707, Room 101. Mr. Greenlee wore gloves, coveralls and a respirator throughout the duration of the work period. A water spray cannister was used to wet the insulation, however, the exterior of the insulation was so hard that the water did not soak through well. Both entrance ways to Room 101 were barricaded and marked with signs indicating a potential asbestos hazard. Please notify employee of results.

Ceiling		___OSHA	___UCC	___Other

COMMENTS

Insulators were monitored while stripping old insulation from about 20 feet of steam line on the second level of Cell 11 in Building 707. Both insulators wore gloves and respirators. Water spray was used to wet the insulation in order to keep the dust down. The fiber concentrations in the samples taken on both men were found to be considerably less than the allowable exposure of 2 fibers/cc.

COMMENTS

Samples taken during stripping of Dowtherm lines in Cell 3 of Building 707. The lines were wetted down with water, however the insulation material was very hard on the outside and the water did not soak through very well. Respirators and gloves were used by the persons monitored. Analysis of the insulation material being stripped showed that it was not asbestos.

COMMENTS

Even though the exposure concentration is near the allowable exposure, Mr. Raines wore a disposable 3M dust respirator which would give him further protection.
