Dear Mr. Wyatt;

With this letter is a copy of our most recent advertisement. It tells about our longer fibres that are so popular in asbestos cement products.

One of the reasons our fibres are in demand is that they experience minimal degradation when subjected to additional opening processing. This allows the customer to buy the right fibre to begin with.

Another "PLUS" for our fibre is its cleanliness; freedom from materials that slow the manufacturing process. Hence, greater filterability, a real savings in production time.

Perhaps you should be using Mother Lode fibres. Won't you please send the enclosed reply card now?

Cordially,

Robert J. Tucker

Mother Lode asbestos fibres add value to your building products

"Mother Lode" chrysotile asbestos fibre from Pacific Asbestos Corporation makes excellent asbestos cement shingles, siding, and flat and corrugated sheets for the building products industry. Our fibres are soft and flexible and do not degrade, even after repeated opening.

Test work has shown that the fibre actually improves on dry screening tests, and that the tensile strength of the finished product increases with additional opening. By opening our fibre to your specifications, you may be able to use a lower grade of fibre at lower cost to replace your present high cost fibre.

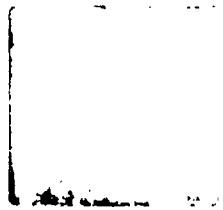

Asbestos cement products made with Mother Lode fibres have high flexural strength, optimum deflection, and low moisture absorption. Combined with their excellent filterability, they enable our customers to produce superior products at significant savings in costs. Write Pacific Asbestos Corporation today for further information.
