SUBJECT: C&P Program to Phase Out Asbestos-Containing Materials in the Workplace

I have attached for your review and location circulation as warranted a draft recommended policy "Use of Asbestos-Containing Materials in the Work Place" and supporting data that recently has been approved by the C&P Manufacturing Council.

Key highlights of the policy are:

1. No asbestos-containing materials shall be purchased after January 1, 1989, except as approved by variance.

2. V&P Specifications Manual will be updated and issued by July 1, 1988, to reflect this change.

Considering the aforementioned, I would highly recommend that we initiate steps now in our plants to question the purchase of any materials or equipment containing asbestos. Many known and acceptable substitutes are available now and though not included in the existing V&P Specifications Manual can be identified by a call to Clyde Neely, et al.

Should you have any questions on the document, please give me a call.

Regards,

Tom Raby/jgh
