Jim

4/12/84

Some time back a question arose as to whether or not some building steel insulation in 156-3 was asbestos. We sent samples off for analysis and received word that it is. I think the plan then is to remove it.

What's the status? Are you having it removed? If so, what consideration has been given to fire protection requirements of the building steel? Are people adequately protected from accidental encounter if the asbestos is still up?
