cc Walt Fitzpatrick

PLAINTIFF'S EXHIBIT

UC-4625

Mr. D. F. Behney
Harwick Chemical Corporation
60 South Seiberling Street
Akron, Ohio 44305

Dear Mr. Behney:

Per our telecon of July 26, 1973, enclosed is a revised Exhibit A for our distributor agreement dated June 1, 1972. The only changes are the deletion of Products CG-135-P and CG-135-O and the addition of Products SG-200X, RG-110 and RG-100.

Lack of commercial acceptance has prompted us to discontinue the promotion and stocking of CG-135.

SG-200X is the mini-pellet version of SG-200 and a revised draft price schedule for these two products is enclosed.

RG-110 is a highly-opened fiber used as a filler in asphalt and similar compounds. A price schedule and data sheet are enclosed.

RG-100 is the pelletized form of RG-144 and can be used as a replacement if adequate mixing equipment is employed. It is priced the same as RG-144 but RG-100 will be available only from King City until geographical usage patterns are developed.

We are sending you the following products and materials to be used for your sample requirements - we appreciate your cooperation in this matter: one 50-pound bag each of SG-200, SG-200X, T-135-P, and RG-100; two 50-pound bags of HPP; one 35-pound bag of RG-144; two 10-pound bags of RG-244; one 30-pound bag of RG-110; 300 each "Calidria" sample boxes, plastic bags, ties and identification tags.

Please attach the revised Exhibit A to your copy of our distributor agreement and indicate your acceptance of it by signing and returning the enclosed copy of this letter.

Best personal regards.

Very truly yours,

John L. Myers
