Full Name: Mosinee Paper Mills Co. Address: Mosinee, Wisconsin and EMPLOYERS INSURANCE OF WAUSAU Wausau, Wis Mfrs of	Interviewed (Give full names and titles) C. A. von Ende, Vice-Pres. Mfg. R. E. Hawkinson, manager-Div. of Special Services, Safety & Health Services

Designate Persons Concerned And Underline If Action Is Required

We requested this meeting with Employers Insurance and U.C.C. personnel to determine that the facts given their client, Mosinee Paper Mills, were consistant with those given U.C.C. by Mosinee Paper Mills. They were not! See Call Report Dated Sept. 3, 1970. — attached

The meeting was cordial and informative. Mr. Hawkinson informed us that Mosinee Paper was their first industrial client, and that good relationships go back many, many years. For this year alone Employers Ins. has sustained claims due to Asbestosis totaling $225.000. These claims are national in scope and arise from all different types of exposure. The only advice given Mosinee Paper was that if Asbestos were used that certain controls, consistant with good employee health and safety standards, be imployed, i.e. exhaust fans in the area if dust levels warrent, and periodic x-rays. We all agreed that when one takes an objective view of Asbestosis and its causes, that it is really no more dangerous than a host of other commonly used industrial products, when proper controls are enforced.

We met with von Ende, who is a personal friend of Gordon Dixon, and both worked together at Gilman Paper, Vermont. He advised that the intended use was to soften their industrial toweling grade. Since there are other known methods to achieve the same end, they have moved on to calendering, and this is working for them. The priority on softening has passed, no further evaluations will be made. Since this was the only known application here, no further calls will be made.
