Subject DUST SAMPLING OF "CAREY-TEMP" INSULATION

To Mr. K. B. Lanham
Insulation Fabrication Shop
Bldg. 511 - Room 2018

cc to Mr. T. C. Comerford
Mr. J. M. Fallon
Mr. P. E. Henry
Mr. H. H. Ketcham
Mr. D. R. Matheny
Mr. K. J. Sexton
Mr. Frank Shaffer
Mr. L. B. Weddell
Mr. Fred Williams

We have received results from the dust sampling series conducted in your shop while the head grinder machine was being used to cut "Carey-Temp" insulation block.

These results indicate that the hazard to health from dust exposure during this operation is very slight and should not present any serious respiratory problems to the machine operator if conducted in a similar manner to the test runs.

During our conversation, you mentioned that you anticipate moving the machine to another location in the shop and also making certain modifications to the machine and dust exhaust system. It is our recommendation that these changes be carried out to their completion in the near future so as to further add to the adequacy of the system.

In order to completely finalize this investigation, we would like to do another series of sampling when more "Carey-Temp" insulation is available and after the above changes and modifications have been made.

If, in the interim period, you have any questions relative to these tests, please notify this department.

Very truly yours,

J. D. Young
