REPORT OF CALL

By: J. E. Skvarla and H. B. Rhodes

Date: 4/28/70

END USE

HPO for Pollution Control

Full Name	Permutit Co.
Address	E. 49 Midland Ave. Paramus, N.J. 07652
Mfrs. of	Pollution Control Equipment and Products

Interviewed (Give full names and titles)

Mr. Hans Lundgren

(Telecon)

Designate Persons Concerned And Underline If Action Is Required

OBJECTIVE

Mr. Lundgren called John Skvarla to obtain information on a new application for which he is preparing a proponal.

OBSERVATIONS

Application is the removal of emulsified oil from a recycle demineralized water for a PVC-PVA manufacturing operation. They have found in the laboratory that 500 ppm asbestos plus a small amount of anionic polymer will give the desired removal. They do not want to use chemicals since these add to the load on the demineralizer.

John Skvarla discussed the layout of a pump-valve mixing system and agreed to provide our data on ΔP and asbestos filtration characteristics. (Sent 4/28/70)

Mr. Lundgren was also concerned about the recent publicity on toxicology. Provided the UCC statement and a copy of the Walsh-Healy Act. Also told him that cracked HPP was a possibility if the application proves out in sufficient volume.

RECOMMENDED ACTION

BLI or HBR Check out in a couple of weeks to see about progress.
