HEALTH HAZARD CAUTION WARNING LABELS
INDUSTRIAL INSULATIONS PRODUCTS

Caution warnings are to be applied to certain packages and products that are sold by IID and that contain asbestos fiber and free crystalline silica. Caution warnings now in existence on some printed cartons and bags are to be revised. New caution labels are to be affixed to unprinted cartons and bags and in some instances to the product itself where health hazards may exist.

The new caution warnings have been developed and have Division, Environmental Control, and Industrial Relations and Legal Department approval.

D.B. Wingerter has taken action to revise and reissue those Purchase Specifications which involve the revision of existing caution warnings or the addition of caution warnings on printed bags and containers. All new orders for printed containers should be to the revised specifications.

Finished Product Specifications are now being revised to include the addition of the new caution labels (L-4955 and L-4956) on unprinted cartons and directly on individual units of product. It is requested that you place your orders now for the new carton labels directly on W.W. Hanold for the products produced at your

location that are listed on the appended sheet. The addition of the labels has the specific approval of D.B. Wingerter. Start using the labels as soon as they are received. Please send me a copy of your label requisition by May 15, 1970.

At such time as the corporate label revision program is put into effect in IID, the new caution warnings will be included in the revised printed product labels. Until this is done, the caution label must be a separate label.

Please contact me if there are any questions.
