Subject: JM INTEREST IN OTHER MINES AND MILLS

In researching the above subject, I have found the following information regarding other mines and mills which JM (through its subsidiary Canadian Johns-Manville Company, Limited) at one time had any interest in or operated:

ADVOCATE MINES, LTD.

Baie Verte, Newfoundland

CJM ownership approximately 40%+ - managing partner with Eternit, who is the major owner. Mines chrysotile - still operating. JM and Eternit are the only customers. (The fiber, I understand, was used in our Pipe Plant.)

REEVES MINE

Ontario, Canada

Owned 100% by CJM. Mined chrysotile fiber, almost all of which was used solely by JM. That fiber which was sold to customers was to make Asbaltic. The mine was closed in 1975 when they ran out of fiber. I have no date when we started Reeves, but it was approximately 1970.

MUNRO MINE

Ontario, Canada

Owned 100% by CJM. Mined chrysotile fiber. The mine operated from approximately 1957 until approximately 1964, when it was closed because it ran out of fiber.

Munro and Reeves used the same mill, as the mines were in close proximity.

I understand Allan Dennis at Asbestos, P.Q. can give us more detail regarding these operations.
