Membrane Filter Technique for
Evaluating Asbestos Fiber Dust Concentrations

In initiating the new measurement and evaluation program for asbestos fiber as outlined in E. M. Fenner's letter of February 10, we would recommend that indoctrination by the Industrial Hygienist be provided not only for the Plant Manager and his staff, but also for union officers and/or employee groups as well.

Mr. Fenner has indicated that in scheduling the initial presentations at each plant location, representatives from his department will be available for the time necessary for these additional groups.
