OCCUPATIONAL HEALTH GUIDES

Two new Occupational Health Guides--on Asbestos and Polyvinyl Chloride--have been developed by the Health, Safety and Environment Department. They are the first two in a series on potentially hazardous materials used in J-M operations. A copy of the guides on Asbestos and PVC are attached for your review.

Both guides were designed as references for supervisory level personnel, rather than for general employee distribution. The guide on asbestos deals with health concerns in a general way so that it can be used by customers and other interested parties for educational purposes. The guide on PVC is more specific to J-M operations.

Additional copies of these guides are available for distribution through our department.

NOTE: In a previous notice we outlined other educational materials and programs on asbestos. Please note that additional materials also are available on PVC/VCM health concerns, including a 20-minute audiovisual program and an employee booklet.
