ASBESTOS TOXICITY

January 1970 through July 1977. 698 Citations. Includes and updates L.S. 73-31.

Prepared by Geraldine D. Nowak

This bibliography contains citations to articles dealing with the biological effects and the risks and hazards of exposure to asbestos in the industrial, municipal, home, and experimental environment. Emphasis is on asbestos and asbestos-related diseases, particularly respiratory effects and cancer in humans exposed to asbestos fibers and dust. Adverse effects, poisoning, and toxicologic studies in humans and experimental animals, in vivo and in vitro, are also of major concern. Consideration is also given to methods of analysis of asbestos in air, water, soil, food, beverages, household products, and other known or suspected sources of the fibers and dust; techniques for controlling the pollutant; minimum standards for exposure; and occupational and public health measures to prevent the asbestos-related disorders.

This bibliography contains references to recent articles selected from some 3,000 English and foreign language biomedical journals and a limited number of monographs. Articles from these journals and monographs are indexed for inclusion in *Index Medicus* and other bibliographies produced by the National Library of Medicine. The references in this Literature Search were retrieved from NLM's MEDLINE data base; the dates above show the period during which the references were added to MEDLINE.

Each citation is listed with the descriptors selected from NLM's list of Medical Subject Headings (MeSH) under which the article was indexed. MeSH descriptors of most significance in an article are identified with an asterisk. The article cited will be found in *Index Medicus* only under these starred descriptors.

A bracketed title indicates the article is in a foreign language. For foreign language articles the designation ENG.ABSTR. follows the publication date if the article includes an English abstract; language abbreviation in parentheses follows.

A full explanation of the elements included in each citation, as well as a complete list of current NLM Literature Searches are included in *Index Medicus, Abridged Index Medicus* and *Monthly Bibliography of Medical Reviews*. To obtain a current list of Literature Search titles, write: Literature Search Program, MEDLARS Management Section, National Library of Medicine, 8600 Rockville Pike, Bethesda, Maryland 20014. Please include your name and address typed on a gummed label (no return postage necessary).
